Different config options for CSS vs JS #291

I may be completely in the minority here (feel free to close this if I am), but I prefer different config options when using prettier for JS compared to CSS. Specifically, I prefer single quotes in JS, but double quotes in CSS. I would like it if I could somehow configure this option differently for the two file types.

@keithjgrant You can add a `.prettierrc` file to do this using `overrides` : https://github.com/prettier/prettier#configuration-overrides

I haven't been able to get this to work. I've added a `.prettierrc` at the root of my project, with the following content:

```
{
  "singleQuote": false
}
```

I've also tried adding a `prettier` key to my package.json:

```
"prettier": {
  "overrides": [
    {
      "files": "src/css/**/*.css",
      "options": {
        "singleQuote": false
      }
    }
  ]
}
```

In both cases, it still changes quotes to single quotes, according to my configuration in the plugin Settings.

I overrode an `scss` option like this and it works perfectly:

```
{
    "singleQuote": true,
    "overrides": [
        {
            "files": "*.scss",
            "options": {
                "singleQuote": false
            }
        }
    ]
}
```

@keithjgrant Do know that due to #270, you'll need to reload Atom after adding your prettier configuration. Sorry about that!

+ 😃

Use prettier #78   ⟨ Closed

Is there a way to use single quotes in Javascript and double quotes in styled components?
They are both in a `.js` file.

I don't think so.

@charlestati Yes, if you're willing to name files with styled components a bit differently, like `file.sc.js` and agree to put there only SC-related code.

👍 1   🙁 1   +😀
